

LAYAN MOHAMMED ALHARBI

AI Engineer | Agentic AI | Machine Learning

Makkah, Saudi Arabia | ijlanxii19@gmail.com | +966 54 689 5456 | [linkedin.com/in/layan-alharbi-b65a78363/](https://www.linkedin.com/in/layan-alharbi-b65a78363/) | github.com/Layanharbi9

PROFESSIONAL SUMMARY

Computer Science graduate (First-Class Honors, GPA 3.81/4.00) from Umm Al-Qura University specializing in Agentic AI, multi-agent systems, and machine learning. Designs LLM-powered agents with tool calling, validation loops, and explainable recommendations—including TELORA, a multi-agent system for personalized telecom packages—alongside ML forecasting pipelines (LSTM, XGBoost, LightGBM) and computer vision models. Top-1% performer in national AI programs with Misk Foundation and SDAIA, and an award-winning hackathon competitor. Seeking AI Engineer and Agentic AI roles in Saudi Arabia.

TECHNICAL SKILLS

Agentic AI & LLMs: Multi-Agent Systems, Tool Calling, LLM Orchestration, Prompt Engineering, Generative AI, Agent Validation
Machine Learning: TensorFlow, Keras, scikit-learn, LSTM, XGBoost, LightGBM, Deep Learning, Computer Vision, Transfer Learning, Time-Series Forecasting, Model Evaluation
Programming: Python, SQL, JavaScript, Java
Data & APIs: pandas, NumPy, Flask, REST APIs, Firebase, matplotlib, seaborn
Tools & Platforms: Git, GitHub, Google Colab, Kaggle, VS Code, Linux

EDUCATION

Bachelor of Science in Computer Science — Umm Al-Qura University, Faculty of Computing
First-Class Honors, GPA 3.81 / 4.00

PROFESSIONAL EXPERIENCE

Agentic AI Engineering Trainee (Remote) | Saudi Digital Academy (SDA) Aug 2026 – Oct 2026
• Completing a 280-hour intensive on agentic AI: multi-agent workflows, tool-calling, LLM orchestration, and API/data integration for enterprise automation.

AI Infrastructure Trainee | Masar Program, SANI x Misk Foundation x SDAIA Jun 2026 – Aug 2026
• Completed a 100+ hour, two-phase AI infrastructure and product development program; selected among 140 finalists from 6,000+ applicants (top 1%) and one of 60 to complete the full program.
• Phase 1 – AI Infrastructure: deployed and explored a live k3s Kubernetes cluster; produced a formal technical report on cluster architecture and workflows.
• Phase 2 – Product Development: co-developed Raqeeb, a governance solution for enterprise recurring commitments, researching Saudi SaaS-subscription market gaps and build two agents for searching and design subscription plans for companies.

Software Developer (Volunteer) | CyberLearn Aug 2025 – Present
• Built web components for an educational platform and supported backend integration from user feedback.

Frontend Developer (Volunteer) | Numu Association May 2026 – Present
• Developed responsive, accessible interface components across devices.

Technical Developer (Volunteer) | Saudi Space Community May 2026 – Present
• Selected as 1 of 9 members in the technical division; contributed to software initiatives supporting Vision 2030 space-tech goals.

Co-op Trainee, AI & Software Development | Technical and Vocational Training Corporation (TVTC) Mar 2025 – Jul 2025
• Completed applied training in AI fundamentals, machine learning concepts, and software development through hands-on programming tasks.

Trainee | Banque Saudi Fransi x Umm Al-Qura University, Professional Supervision Program Feb 2024 – Nov 2025
• Completed rigorous 1-year program (1 of 99 completers) aligned with Vision 2030; mentored in business communication and leadership.

PROJECTS

TELORA — Agentic AI for Personalized Telecom Packages — Multi-Agent Systems, LLMs, Tool Calling, Python
• Built a Design Agent that generates package candidates from customer profiles, usage, and budget, and an independent Validation Agent that checks eligibility, pricing, features, and fit before an explainable recommendation.
• Extended the workflow with a Monitor Agent that continuously rematches stc customers as usage evolves; a human approves before a simulated Action API executes the package change.

SANA — Smart Utility AI Platform — Graduation Project, AI Engineer
• Built LSTM/XGBoost/LightGBM forecasting models for utility consumption; developed Flask REST API integrating 9 AI modules with Firebase and a GPT-4o-mini voice assistant.
• Engineered a 5,597-record dataset and validated forecasting models with TimeSeriesSplit/MAPE; bilingual dashboard for model outputs.

RASED — Smart Waste Monitoring Platform — Jada Thon (Jada 30) Hackathon, AI Engineer, 3rd Place
• Built an AI/computer vision MVP for waste analysis; designed a supervisor dashboard with heatmap alerts and routing for Hajj operations.

Smiley — Smile Detection System — Computer Vision, Python, TensorFlow
• Applied MobileNetV2 transfer learning to classify smiles with high accuracy; evaluated using precision/recall metrics.

ACHIEVEMENTS & SELECTIVE PROGRAMS

• 1st Place, Government Services Innovation Hackathon, Al-Baha Emirate | 3rd Place, JadaThon (RASED) | 3rd Place, Riyadh Municipality Smart Cities Hackathon
• Top 4/800+, Roshen Hackathon | Top 7, Taaqathon | Top 10, HP GameJam | Top 10, Innovation Hackathon for Positive Change
• Research Paper Award, Hajj & Health Security Hackathon (MOI) | 1 of 9, Saudi Space Community Tech Division
• 1 of 60 finalists (6,000+ applicants), Masar Program (Misk x SDAIA) | 1 of 5,000 globally, Women Elevate (UNESCO x Microsoft x SDAIA) | 1 of 34, SHE PLAYS SHE BUILDS (QabasTech)

CERTIFICATIONS

AI & Generative AI: Introducing Generative AI (Udacity x AWS) · Machine Learning Foundations (AWS) · Fundamentals of AI (SDAIA) · Neural Networks & Deep Learning (U. Michigan) · Improving Deep Neural Networks (U. Michigan) · HCIA-AI (Huawei)
Data & Analytics: Data Analysis (Misk Foundation) · Python Basics (U. Michigan)
Development & Design: UX/UI Design (Tuwaiq Academy) · Cybersecurity Fundamentals (IBM) · Android Developer (MCIT Saudi Arabia)
